<h2>course content</h2>
<h3>information about course python for Cybersecurity</h3>
<p> </p>

<p>You will learn the basics of the Python programming language and how to write scripts and functions and
handle data and variables You will learn how to use Python for analyzing security data

and developing tools for vulnerability scanning and security verification You will learn how to use

Python for network analysis and developing for detecting network attacks You will learn the basics
tools

of encryption and coding using Python famous encryption algorithms such as AES and RSA You will
and applying learn how to use Python for digital forensic analysis and developing tools for data retrieval
and analysis You will learn how to use Python

for conducting security tests and developing tools for penetration testing and vulnerability
verification You will learn how to use popular Python libraries such as Scapy and Requests
and develop tools for interacting with networks and servers You will implement practical
projects that apply what you have learned in the course and develop real security tools
and apply them in simulation environments</p>
```

Duration: 30 hours

 Instructor: Waheeb Al-Sharabi

 Certificate: Not included

 Price: Free for a limited time
